

Name _____

Date _____

What is a line of symmetry?

Fold along the line. Do the two halves match exactly?

If they match it is a line of symmetry.

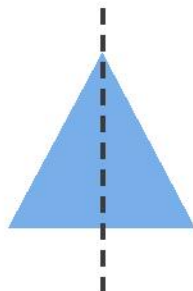

The left half and the right half of a heart match,
so the line down the middle is a line of symmetry.

The top half and the bottom half are not the same,
so a line across the middle is not.

A shape can have more than one line of symmetry, or none at all.

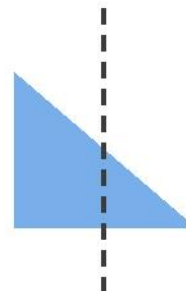

Now you try

Answer: yes

yes

no

Answer: no

yes

no
