

Name _____

Date _____

Taking away from 20

Cross them out, jump back, or turn it into an addition.

13 - 5 Cross out 5 of the 13.

$$13 - 5 = 8$$

The 3 in the second frame go first, then 2 more. 8 are left.

The same jump, going back

Start at 13. Jump back 5. You land on 8.

Cross them out > Jump back > Think addition > Just write it

13 - 5 asks: 5 plus what makes 13?

Adding up is easier than counting back for most children.

The big number always goes first in a subtraction.

Jumping back one at a time is fine. Speed comes later.

If addition to 20 is shaky, do that set first.
